

Mootaz Alhalak

Full-Stack Developer

I build systems end-to-end — and a background in penetration testing means I build them with security in mind from day one.

Damascus, Syria · mootazalhalak695@gmail.com · (+963) 959 902 075 · linkedin.com/in/mootaz-alhalak-30a561255 · github.com/mootaz20

PROFILE

Full-Stack Developer with proven experience delivering production systems across energy, hospitality, HR, logistics, and e-commerce sectors. Comfortable owning the full lifecycle — from database schema and REST API design to Angular dashboards and production deployment on Linux servers with Docker. Additional background in penetration testing (OWASP Top 10, Burp Suite, Metasploit) means security best-practices — RBAC, JWT auth, input validation, secure API design — are built in from the start, not bolted on later.

EXPERIENCE

Full-Stack Developer — 90Soft Syria

2024 – Present

Building and maintaining large-scale production platforms across multiple industries using Angular (frontend) and Parse Server / NestJS (backend, MongoDB).

■ GMS — Generator Management System (Syriatel)

Full-stack control center for managing operational sites, generators, and maintenance workflows — built from scratch and deployed to Syriatel's production servers.

- Preventive Maintenance engine: tracks generator working hours to auto-trigger spare-part servicing; mobile-first submit flow syncs back to a separate GMS-Inventory system.
- Image pipeline: upload-first flow with WebP conversion, thumbnails, blur placeholders, and daily cron cleanup of orphaned uploads.
- Platform: role-based auth, bilingual EN/AR with auto RTL/LTR, light/dark theme, server-side paginated table with bulk actions and Excel export, global entity search.
- Deployed via Docker on Syriatel's Linux servers; handled production bug fixes post-launch.

Stack: Angular 21 · PrimeNG · Tailwind CSS · Parse Server · TypeScript · MongoDB · Docker

■ SOA Fuel — Fuel Delivery Operations Platform (Syriatel)

End-to-end fuel delivery management system handling trips, site visits, and corrective maintenance — integrating with two external enterprise systems (FCMS for trips, Camunda BPM for maintenance workflows).

- Trip lifecycle management: pulls trips from FCMS API, tracks a multi-step status flow (Open → In Progress → Back-Office → Closed) with duplicate and race-condition handling.
- Real-time updates via Parse LiveQuery; site-access request and approval workflows with dedicated back-office flows.
- Security: account lockout after 5 failed attempts, 24-hour sessions, role groups, and configurable auth rules.
- Admin dashboard covers 15+ modules: trips, visits, sites, CM tasks, users, roles, companies, email templates, scheduled APIs, loggers, and more.

Stack: Angular 17 · PrimeNG · Tailwind · Parse Server · TypeScript · MongoDB · LiveQuery · Camunda BPM · ngx-translate · Winston logging

■ General Assistant — AI Support System

AI-powered support gateway letting clients interact with an AI assistant before being routed to human agents. Built frontend, backend, automated workflows with n8n, and delivered a real-time WebSocket messaging experience.

■ Transportation & Trip Management Platform

New CRUD modules, UI/UX fixes, and HyperPay online payment integration.

■ Nilz Hotel Reservation System

Dashboard + landing page, Firebase push notifications, reservation workflows.

■ **Smart Station Website & Dashboard**

Full system: service management, cart logic, dynamic content, admin dashboard.

■ **HRMS — Human Resource Management System**

Notification system, new features, ongoing support (Angular + NestJS).

■ **Chamsale — C2C Marketplace**

Dynamic category forms, buy/sell UX, posts/comments/ratings, admin moderation.

■ **Albaset Market & Leaders Institute**

Responsive product-showcase platform and ongoing dashboard/website support.

MERN Stack Developer Trainee — Focal X Agency Syria

Aug 2024

Intensive full-stack training programme. Ranked 3rd in cohort; received CEO recommendation letter.

TECHNICAL SKILLS

Languages	JavaScript (ES6+), TypeScript, HTML5, CSS3
Frontend	Angular 17/21, React, Redux, PrimeNG, Angular Material, Tailwind CSS, Bootstrap, WebSocket, ngx-translate
Backend	Node.js, Express.js, NestJS, Parse Server (LiveQuery), RESTful APIs, JWT Auth, RBAC, CRUD
Database	MongoDB
DevOps	Docker, Linux server deployment & production debugging, Git, GitHub
Integrations	n8n (workflow automation), Camunda BPM, HyperPay, Firebase, CKEditor, Winston logging, Excel export (xlsx)
Security	OWASP Top 10 awareness, secure API & session design, input validation, penetration testing fundamentals (Burp Suite, Nmap, Metasploit)
Design	Figma → responsive UI, RTL/LTR i18n, image optimisation (WebP / thumbnails)

CERTIFICATIONS

Cyber Security Internship — Focal X Agency · Dec 2025 · Score: 98.80% · Rank: 2nd

Foundations of Cybersecurity — Google / Coursera · Aug 2023

Networks and Network Security — Google / Coursera · Sep 2023

Linux and SQL — Google / Coursera · Oct 2023

MERN Stack Training — Focal X Agency · Aug 2024 · Rank: 3rd

EDUCATION

Bachelor's Degree, Computer Science — Damascus University Syria

5th Year (In Progress)

LANGUAGES

Arabic — Native · English — Intermediate
